## HAMMEL – Success story

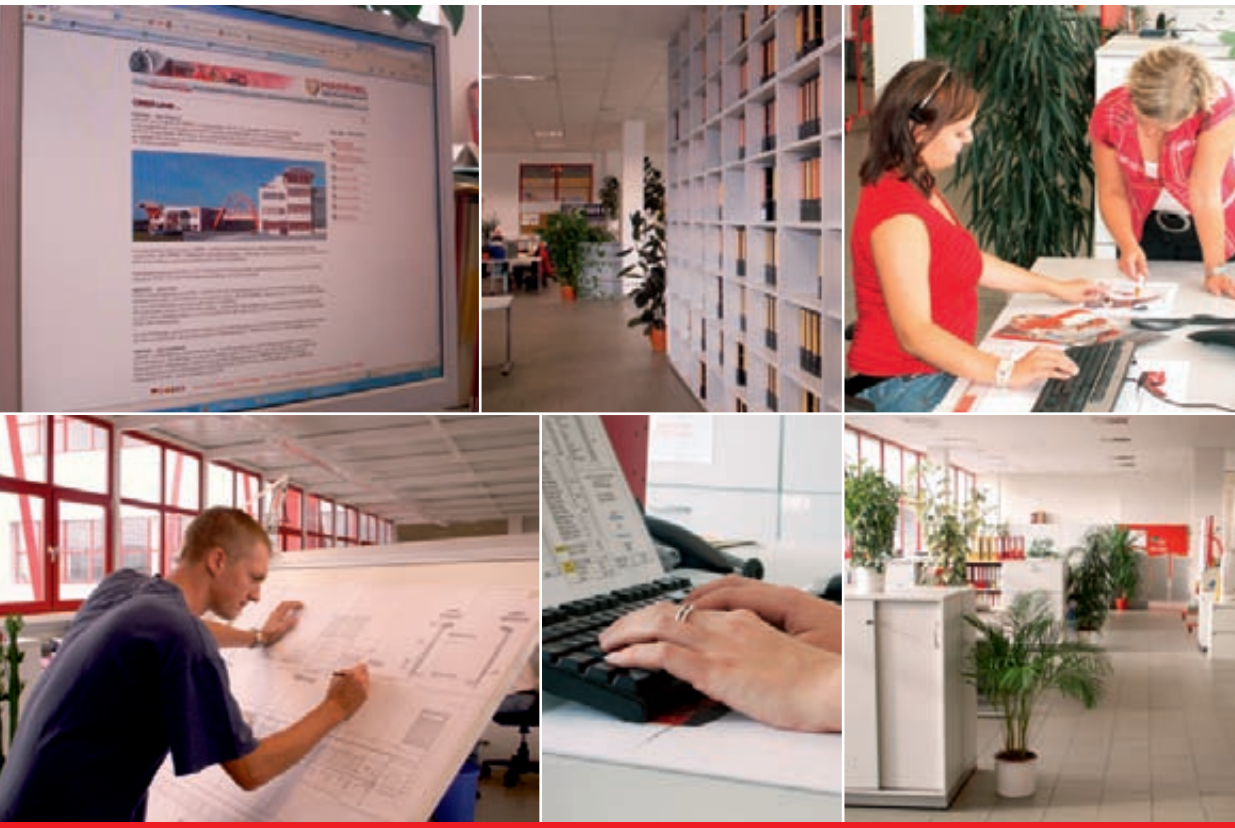

*What started out as a small company for agricultural machinery in a locksmithery, has now grown into an innovative and efficient company with 600 employees worldwide.*

*The foundation of today's company profile has been laid with the new re-establishment of the company in 1996 and priority is given to practical and customer-oriented development of recycling machines. The heart of each machine are the patented and long proven HAMMEL shafts, that have been copied worldwide but never equalled in quality.*

*Our success shows we are right! Continuously increasing company size and market shares – especially in the export market – are the best proof for the quality of our machines and the reliability of our service. This continuous achievement has made us to the world market leader in our sector. A highly motivated team of professionals in the area of development, engineering, sales, service and marketing are working daily on meeting and exceeding our customers' requests and requirements worldwide.*

*By that we pay equal attention to economy, ecology and technical aspects. Thus we could already expand our activities to cover all continents worldwide, and the trend is further increasing.*

## HAMMEL – Know-how

*Our extensive knowledge in all technical areas results from the requirements of our customers worldwide. And thanks to our broad experience we can solve all types of recycling issues.*

*The here from resulting holistic method of operation, with clear depth, is our winning margin and your advantage. The result of our work is reflected in the long lasting, trusting relationship to our customers.*

*Despite modern technology, our activities are affected by traditional values. Flat hierarchies, an open company philosophy, team spirit and self dependent actions create an effective working climate in which our customers' challenges are taken seriously. Here we focus on the development of the best solution.*

## **HAMMEL** – *We face up to the tasks from all over the world....*

*To offer every customer the according service, is not just a task, but also a challenge. We already have a strong, well functioning service network, which comprises the countries of the USA, Australia, Scandinavia, UK, the Netherlands, France, Spain, Switzerland, Italy, Russia and Asia. All other countries are currently served by our service team from our headquarter based in Germany.*

*A profound knowledge base, a great pool of experience and mainly the high communication flow with our dealers worldwide, enable us to respond to all arising recycling problems.*

*Whether a demonstration of a HAMMEL-shredder, the exchange of wear parts, the regeneration of shafts, or the service on the chassis and power unit respectively.*

*Our highly motivated and dynamic service personnel work daily on the requirements of our customers and in this connection are characterized through long time experience, a high qualification and constant availability.*

## HAMMEL – Quality & Service

Nowadays, our service team maintains HAMMEL-shredder, that have accomplished more than 60.000 operating hours. A fact that speaks for itself! The carefully selected components from only well-known manufacturer in the drive and control system industry make our machines the top products in the market and give our customers the assurance for the optimal efficiency and a long durability.

Every stage in the development and construction design is carried out in our factory in Bad Salzungen, Germany. We work out all machine specification in close cooperation with the customer. Nevertheless, the highest priority is given to the safety of the operating staff during production and development. In particular, the “original” HAMMEL tools are specifically adapted to fit the material and the desired product end size.

## HAMMEL – *Pure performance*

*The investment in the HAMMEL technology pays off! Especially highly efficient machines, service reduced and with low maintenance, will yield you the crucial advantage.*

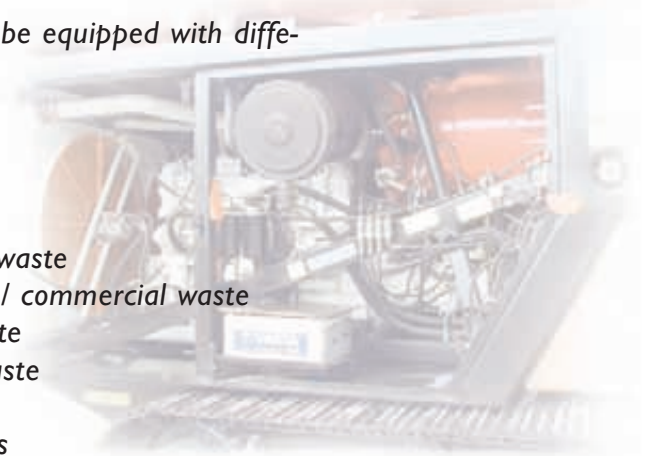

*Compare us with other manufacturers! Our machines can be equipped with different tools to enable the shredding of various materials.*

### **Material**

- waste wood/ demolition wood
- pallets
- mixed wood
- cable drums
- railway sleepers
- telephone poles
- root stems
- green waste

### **Material**

- domestic waste
- industrial / commercial waste
- bulky waste
- C & D waste
- paper
- paper rolls
- used tyres
- car bodies
- high caloric fuels 150 mm

*All machines can be obtained either as electric or diesel model. Furthermore, there are several different transportation possibilities and energy-saving drive techniques available, such as a stationary, semi-mobile on a hook lift for transportation by truck, or as a mobile version on track systems.*

## HAMMEL – Individually adapted to your needs!

*All customer requests and wishes come directly together in the machine development at our factory in Bad Salzungen, Germany. A high potential in experience and a close, durable coordination with the production department enable the individual construction of our machines and processing plants.*

*The local, constructional and logistical conditions are the fundamentals of all planning. Hence, we construct modern, powerful recycling plants, that offer you ideal processing conditions within an ecological, economical and safety-engineering framework.*

*Intensive counselling-interviews are at the beginning of each development to achieve the most suitable result in throughput and end product size for you, but most of all to achieve an optimized capacity expansion. Processing plants throughout the world proof our competence and quality work.*
